

**SOUTHWEST DELAWARE COUNTY MUNICIPAL AUTHORITY**  
**Deduct Meter Information and Reporting Procedure**

Attached you will find the information on a deduct meter. It is not required that you purchase this specific brand; the information is provided as an option.

Once you have had your deduct meter installed, please contact our office so that a representative from the Authority can do an inspection of the installation of the meter. Without an inspection of the meter, a deduction to your sewer billing will not be authorized.

Once the inspection has been completed, you will submit a photo of the deduct meter reading at each quarter end (March 31, June 30, September 30 and December 31). You may print and mail the photo (including the date the photo was taken) to our office, or you may submit the photo via email to [cnelson@swdelcoma.org](mailto:cnelson@swdelcoma.org).

The deduction for the water going through the deduct meter will be applied to the quarterly invoice in which the usage is billed by the Authority.

# DLJ Hose Bibb (Sill Cock) Water Meters With Garden Hose Thread Inlet & Outlet

[www.watermeters.com](http://www.watermeters.com)

*the first and still the best online source for water meters*

In many towns you can deduct your garden, irrigation or pool water usage to reduce your sewer charge on your water bill. This alone will pay for the water meter in less than 30 days in most cases. Contact your town or water company, our meter is approved by most of them

It is a low cost item that will also pay for itself in money saved due to water conservation, electric water pumping costs and reduced strain on your septic system from increased awareness of usage.

This water meter features an easy-to-read odometer type reading in single gallons (down to the tenth) and an additional rotary dial with a sweep hand reading one tenth of a gallon per revolution with graduations down to 1/100 of a gallon (1.28 fl oz). There is also a spinning trickle indicator showing if there is any flow at all to detect leaks.

With this meter, you can take all the guess work out of delivering the right amount of liquid fertilizer to all of your plantings. Now you know exactly how much water each plant gets and you can prevent root rot and other infestations before they take hold in your garden.

Total registration on the water meter dial is up to 10 million gallons, but the meter will last much longer than that. This meter is quality constructed of nickel plated waterworks bronze according to ISO 4064 standards for accuracy, quality and length of service life.

This water meter conforms to or exceeds all published US and European accuracy standards and will reliably detect usage down to a hundredth of a gallon.

It is also available in a hot water model up to 194 degrees F and with a contact microswitch on the register for remote registration and data acquisition. *Please ask about these options when calling or emailing.*

This is ideal for protecting your expensive koi pond investments. Know exactly how much water you are adding with your chemicals and keep your fish healthy and your pond clear.
